

WHAT TIME IS IT?

My story is about the small clock down by the Wells fire station and why I think it should be larger.

These are some of the reasons that I was surprised about the clock. It was very small when I first saw it. From your car you can hardly see the face of it. When you are driving by the clock, the clock measures 10 feet high so if you are a truck driver you would not notice it. I think the location of the clock is not great because it is on a corner. I think it should have been put when you come off of the highway. Do you know that the clock was not even made in Maine? It was made in Massachusetts.

My last reason is I thought the Wells clock was going to be like the one in the movie Back to the Future. In the movie, Marty the main character has a friend named Doc. Doc built a car that travels back to the past. Marty took the car and went back to the past. At the town hall there was a big clock on the front of the building. The face of the clock was about 10 feet big so everyone could see it. I thought the town of Wells would have built a clock like that but they didn't. In the movie Marty's car broke and Marty had to use the clock and lightening to get back to the future.

As a kid I do not know how much a big clock like that would cost but I know the clock in Wells did cost over \$25,000.00. I think the money was kind of wasted on a small clock. I hope in the future the Town of Wells would buy a bigger clock.
