

EXPOSURE CONTROL PLAN FOR BLOODBORNE PATHOGENS PROCEDURE

In the interest of protecting employee health and safety, the Wells-Ogunquit CSD hereby adopts the Occupational Safety and Health Administration's 29 CFR Part 1910.1030, "Occupational Exposure to Bloodborne Pathogens; Final Rule" as part of its safety program.

The Superintendent/designee shall comply with Federal Occupational Safety and Health Administration (OSHA) Standard (Title 29, Part 1910.1030) to prevent the spread of bloodborne pathogens and other potentially infectious materials in the workplace. The Superintendent/designee shall develop a written Exposure Control Plan designed to protect employees from possible infection caused by contact with bloodborne pathogens as a result of performing job duties. The bloodborne pathogens include but are not limited to human immunodeficiency virus (HIV) and hepatitis B virus (HBV) and hepatitis C virus (HCV).

As part of the Exposure Control Plan, the Superintendent/designee shall determine which employees could reasonably be expected to have exposure to bloodborne pathogens and other potentially infectious materials contaminated with blood as a result of performance of job duties. Employees determined to have occupational exposure shall participate in in-service education during their work hours and be offered hepatitis B vaccine at no cost.

Any employee not identified as having risk for occupational exposure in the school district's exposure determination may also participate in the in-service education and/or hepatitis B vaccination program.

If an employee is exposed to the blood or other potentially infectious material contaminated with blood of another person as a result of performing his/her job duties, the Superintendent/designee shall, as part of the Exposure Control Plan, put in place a system for immediate reporting of the exposure incident by an employee. As soon as possible after exposure, the employee will seek medical attention by a licensed health care provider or agency. The school district will provide payment at no cost to the employee. In addition, the school district will pay for a confidential medical evaluation and follow-up by a licensed health care provider or agency at no cost to the employee.

Medical records will be maintained by the school district for thirty years after the employment of those employees who report exposure to bloodborne pathogens as a result of performance of job duties. Further, the medical records will be stored in compliance with federal, state and local laws regarding privacy and confidentiality of all medical records and any additional legal protection for information related to HIV infection and AIDS. Records of participation in in-service programs provided by the school district for employees will be compiled and maintained for three years.

I. PURPOSE

In accordance with the OSHA Bloodborne Pathogens Standard, 29 CFR 1910.1030, the following exposure control plan has been developed.

II. SCOPE

This plan is to cover all WOCSD employees who could be "reasonably anticipated," as the result of performing their job duties, exposed to blood and other potentially infectious materials. Infectious materials include semen, vaginal secretions, cerebrospinal fluid, pleural fluid, pericardial fluid, amniotic fluid, saliva in dental procedures, and body fluid visibly contaminated with blood, and all body fluids in situations where it is difficult or impossible to differentiate between body fluids. They also include any unfixed tissue or organ other than intact skin from a human (living or dead) and human immunodeficiency virus (HIV) containing culture medium or other solutions as well as blood, organs or other tissues from experimental animals infected with HIV or HBV.

III. EXPOSURE CONTROL PLAN

- A. Identify job classifications for WOCSD faculty, staff and administration where occupational exposure to blood occurs without regard to personal protective clothing or equipment.
- B. Identify tasks associated with the above classifications. Task defined: Any activity which involves the handling of or possibility of handling of blood or other potentially infectious materials as described above.

IV. EXPOSURE DETERMINATION

OSHA requires employers to perform an exposure determination identifying which employees may incur occupational exposure to blood or other potentially infectious materials. The exposure determination is made without regard to the use of personal protective equipment (i.e., employees are considered to be exposed even if they wear personal protective equipment). This exposure determination is required to list all job classifications in which all employees may be expected to incur such occupational exposure, regardless of frequency. Within this school district, the following job classifications are in this category.

- A. Classification I/Tasks and Procedures
 - 1. School Nurses/First Aid, Care of the sick, Decontamination of the environment, Activities for Daily Living.
 - 2. Custodians/First Aid, Decontamination of environment.

In addition, OSHA requires a listing of job classifications in which some employees may have occupational exposure. Since not all the employees in these categories would be expected to incur exposure to blood or other potentially infectious materials, tasks or procedures that would cause these employees to have reasonable anticipation for occupational exposure to bloodborne pathogens.

Procedures that would cause these employees to have occupational exposure are also required to be listed.

- B. Classification II/Tasks and Procedures
 - 1. Principals/First Aid, Care of the sick;
 - 2. Assistant Principals/First Aid, Care of the sick;
 - 3. Secretaries/First Aid, Care of the sick;

4. Education Techs and Special Education Techs/First Aid, Care of the sick, ADLs;
5. Teachers and special education teachers /First Aid, Care of the Sick, ADLs;
6. Food Service/First Aid

V. EMPLOYEE AWARENESS

This plan will be accessible to WOCSD employees through the following means:

- A. Copies of the plan are to be posted in all the main Office and Nurse's Office where there are employees in the identified classifications. Copies will also be accessible on-line.
- B. Copies of the plan will be sent to all administrative personnel for insertion into the policy manual.
- C. Copy to be added to online policy manual.
- D. Training of employees will be done on a yearly basis.

VI. ANNUAL REVIEW AND UPDATE

At the end of each school year, the policy/plan is to be reviewed and updated. The review will be conducted by WOCSD health personnel and recommendations will be made to the Superintendent. The updated plan, if changes are made, will be distributed to those indicated in the previous section.

VII. IMPLEMENTATION SCHEDULE AND METHODOLOGY

OSHA requires that this plan also include a schedule and method of implementation for the various requirements of the standard. The following complies with this requirement:

A. Compliance Methods

Universal precautions will be observed in this school district to prevent contact with blood or other potentially infectious materials. "Universal Precautions" is an approach of infection control. The concept of universal precautions is that all human blood and body fluids are treated as if known to contain disease-causing germs (pathogens). It is not always possible to know when blood or body fluids are infectious; therefore, all body fluids shall be handled as if infectious. All employees shall routinely observe the following universal precautions to prevent and reduce spread of infectious disease:

B. Personal Protective Equipment

All personal protective equipment used in the school district will be provided without cost to employees. Personal protective equipment will be considered appropriate only if it does not permit blood and other potentially infectious materials to pass through or reach the employee's clothing, skin, eyes, mouth or other mucous membranes.

Gloves shall be worn where it is reasonably anticipated that employees will have hand contact with blood, other potentially infectious material, non-intact skin and mucous

membranes. Gloves will be used for the following procedures: administering first aid, housekeeping tasks, nursing procedures (e.g., catheterization, suctioning, assisting an incontinent student, etc.). Gloves will be available from health/nurse's offices and custodial areas.

Wear disposable waterproof gloves whenever you expect to come into direct contact with blood, other body fluids containing blood, or contaminated items and surfaces. This applies to incidents including, but not limited to, caring for nose bleeds or cuts, cleaning up spills, or handling clothing soiled by blood or body fluids containing blood. Do not reuse gloves. After each use, remove gloves without touching the outside and dispose of them in a lined waste container.

C. Engineering Controls

1. Sharps containers will be located in the appropriate health/nurse's offices. These containers will be examined and maintained on a regular schedule. When sharps containers are full, the school nurse will be responsible for making arrangements to having them transported to a licensed biomedical waste facility. School nurses will inspect sharps containers with each use. Contaminated needles and other contaminated sharps will not be bent, recapped nor removed.
2. Hand washing facilities are available to employees who incur exposure to blood or other potential infectious materials. OSHA requires that these facilities be readily accessible after incurring exposure. Within this school district, hand washing facilities are located in most bathrooms, in most custodial areas, in kitchen areas, in some classrooms and in the nurse's offices.

After removal of personal protective gloves, employees shall wash hands and any other potentially contaminated skin area with soap and water immediately or as soon as feasible. All staff should routinely observe the following universal precautions to prevent and reduce spread of infectious disease:

- a. Wash hands and any other contacted skin surfaces thoroughly for 15 to 30 seconds with dispensable soap and warm running water, rinse under running water and dry thoroughly with disposable paper towel.
 - i. Immediately after any accidental contact with blood, body fluids or drainage from wounds with soiled garments, objects or surfaces;
 - ii. Immediately after removing gloves or other protective equipment or clothing;
 - iii. Before assisting others with eating and drinking as well as eating or drinking yourself;
 - iv. Before handling food, cleaning utensils or kitchen equipment; and
 - v. Before and after diapering and assisting with toileting, as well as toileting yourself.

When running water is not available, use antiseptic hand cleanser and clean towels or antiseptic towelettes and use soap and running water as soon as feasible.

- b. Clean surfaces and equipment contaminated with blood with soap and water and disinfect them promptly with a district approved germicidal agent. While cleaning, wear disposable gloves and use disposable towels whenever possible. Rinse mops or other reusable items in the disinfectant and dry thoroughly.
- c. Properly dispose of contaminated material and label them as bio-hazards.
 - i. Dispose of materials saturated with blood or any other potentially infectious substance into appropriately labeled plastic bags or lined waste container. Sharp disposable objects shall be disposed of in leak-proof, puncture-proof containers. (Example: A band-aid or tissue with a small amount of blood maybe disposed of in a regular waste can. A dressing that is so saturated that it could release blood during handling should be disposed of in a bio-hazard bag.)
 - ii. Bag soiled towels and other laundry and send home.
 - iii. Dispose of urine, vomit, or feces in the sewer system.
 - iv. Do not care for the injuries of others if you have any bleeding or oozing wounds or skin conditions yourself.
 - v. Use a barrier device when readily available when it is necessary to provide mouth-to-mouth resuscitation.
 - vi. Immediately report any incident of accidental exposure to blood or first-aid incident that involved direct contact with blood in accordance with school district policies about accident reporting and exposure.

D. Housekeeping/Decontamination of Environment

The following school facilities will be cleaned daily and after each body fluid spill: all bathrooms, all health/nurse's offices, all administrative areas, all daily use sink areas, and all water fountains.

Decontamination will be accomplished by utilizing a district approved germicidal agent.

All contaminated work surfaces will be decontaminated after completion of procedures, immediately after any spill of blood or other potentially infectious materials, and at the end of the work shift. All equipment (e.g., mops, brushes, dust pans) used in cleaning up potentially contaminated materials will be decontaminated immediately. All mops, brushes, bins, pails, cans and similar receptacles shall be inspected regularly and by custodians on a daily basis. Plastic bags in waste receptacles located in health/nurse's offices and all bathrooms will be changed daily.

Any broken glassware which may be contaminated will not be picked up directly with the hands. The following procedures will be used: brush and dustpan will be used to assist picking up contaminated glass. Potentially contaminated glass will be placed in a puncture-proof bio-hazard container.

Handle contaminated laundry in areas of use. Always use appropriate personal protective equipment when handling contaminated laundry. Before transporting, place contaminated laundry in leak-proof plastic bag and send home.

E. Hepatitis B Vaccine

Although the school is a low risk setting, all employees will be offered the Hepatitis B vaccine, at no cost to the employee. Employees are encouraged to request the vaccine through their own primary health care provider to ensure all medical concerns are addressed. If the employee does not have a primary care provider, the district will refer the employee to an appropriate licensed provider or agency. Employees in Classification 1 will be asked to sign the Bloodborne Pathogen Declination Statement indicating their consent, declination, or provide previous proof of vaccination. Employees unsure of vaccination status may be requested to have antibody titers own at their own expense. Employees who initially decline the vaccine, but who later wish to have it may have the vaccine provided at no cost. It is the employee's responsibility to complete the series and return documentation of the dates to the School Nurse.
